[TODO: disclose the use of AI tools for code, analysis or writing, or state that none were used]

Author Contributions

Parv Bhargava: Conceptualization, Methodology, Software, Formal analysis, Investigation, Writing – original draft.

Amir Jafari: Formal analysis, Validation. **[TODO: confirm roles, e.g. Supervision, Writing – review and editing]**

Aihan Liu: Validation, Writing – review and editing. **[TODO: confirm roles]**

Statements and Declarations

Ethical Considerations

Ethical approval was not required for this study. It uses only publicly available benchmark collections and their published relevance judgments, and it involved no human participants, personal data, or animals.

Consent to Participate

Not applicable.

Consent for Publication

Not applicable.

Declaration of Conflicting Interest

The authors declare no conflicts of interest and have no relationship with TypeSafe (Jev), Cloudflare (Clef), firelex (Jeff), ConvAI Innovations (Laya), or OpenRouter. **[TODO: each author to confirm]**

Funding Statement

The authors received no financial support for the research, authorship, and/or publication of this article. All API costs were paid personally by the first author; no company, including the providers of the evaluated models and OpenRouter, provided credits, payment, or other support. **[TODO: confirm that no grant or institution covered any costs]**

Data Availability

All collections are publicly distributed and are downloaded automatically by the released code; the underlying Robust04, TREC News, and Signal-1M corpora remain subject to their providers' data agreements. Code, prompts, split IDs, input hashes, and aggregate results are available at `https://github.com/parv-bhargava/ChoiceRank`.
